Building solutions

Ramabi Global Yapi operates in building construction, aluminium and timber joinery, façades and finishing works. Its activities also include participation in the delivery of road and hydraulic infrastructure projects.

Roads, urban roads and drainage

The company aims to expand its role in the execution of works: road construction and rehabilitation, urban road development, drainage and sanitation infrastructure.

Hydraulic infrastructure and irrigation

The construction of water infrastructure and irrigated schemes is another area of development. Ramabi aims to deliver more projects in its own capacity, mobilising the technical expertise and resources required.

Subcontracting, personnel mobilisation and the supply of materials and equipment complement this offering. Its project references span Türkiye, Benin, Niger and Sierra Leone.

Practical exchanges

Working meetings, professional encounters and site visits support project development and exchanges with partners.

Professional meeting and site visit.

Our areas of activity

Building and finishing works

Construction, renovation and fit-out.

Joinery and façades

Aluminium, timber, glazing and exterior cladding.

Roads and hydraulic infrastructure

Participation in road, drainage, sanitation and irrigation projects.

International trade

Supply of materials, equipment and production units.

Aluminium and timber joinery

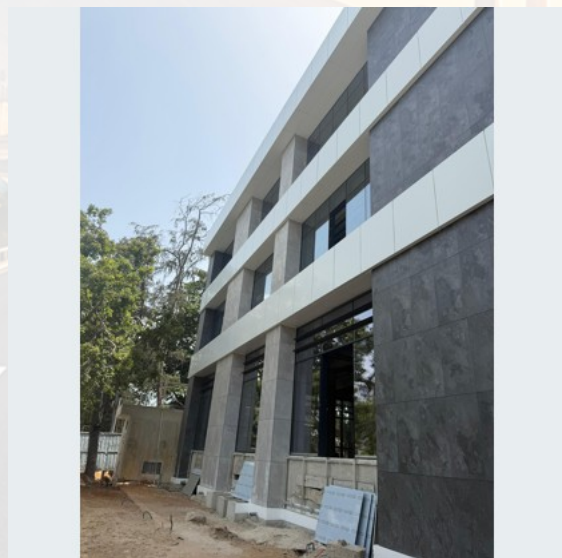

Solutions for residential, commercial and administrative buildings: doors, windows, glazed openings and joinery works.

Visit to a joinery workshop.

Façades and cladding

Façades combine aluminium joinery, glazing and exterior finishes. Ramabi's references include work on multi-storey buildings.

Finishing and fit-out

EXPERTISE
IN THE FIELD

Finishing works contribute to the functionality and quality of spaces: joinery, surface finishes, lighting and electrical installations, according to the assigned work packages.

Roads and water infrastructure

Ramabi participates in infrastructure projects as a subcontractor. Depending on the contract, its scope includes mobilising technical personnel and delivering materials and equipment.

Road works and earthworks for irrigation.

Materials and equipment

Supply and delivery to meet construction site requirements: cement, reinforcing steel, bitumen and equipment.

References also include solar street lighting poles, traffic lights, galvanised guardrails, and brick and paving block production units.

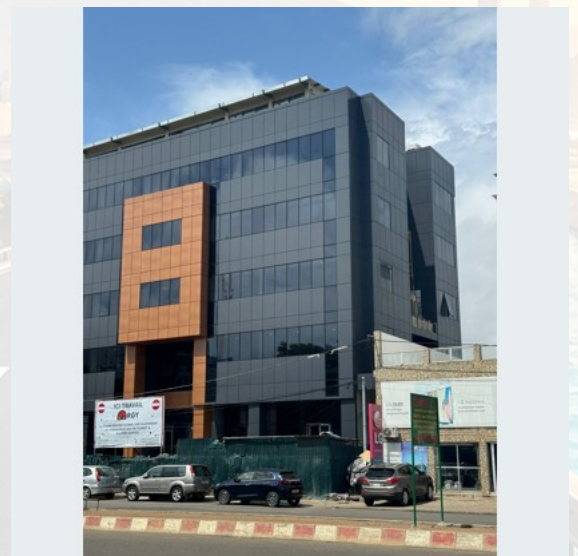

STEINMETZ 1

Cotonou, Benin

Ground floor plus four-storey building for offices and commercial use.

Contribution: aluminium joinery.

CNSS Akpakpa

EXPERTISE
IN THE FIELD

Cotonou, Benin
Administrative building.

Contribution: subcontracted aluminium and timber joinery.
